100% RENEWABLES INSTEAD OF NUCLEAR ENERGY

Side Event
Tuesday, June 14th, 8-9:30 p.m.
Ministry of Transport, Room RAIL

Nuclear power is a false solution to the climate crisis in both North and South. The Fukushima Nuclear Disaster has shown once again that the risks are too great, even in highly industrialized countries. Harnessing the atom as an energy source is dangerous and economically possible only with large subsidies.

The best alternative, safe and democratic, is efficiency and the use of decentralized renewable energy sources. We will present and discuss measures for a sustainable energy future, and look forward to a good discussion.

Opening presentations will give 'food for thought' on:

- **The main concepts of "Der Energetische Imperative"** (The Energetic Imperative), based on the 2010 book of Hermann Scheer
 - *Dr. Nina Scheer*, Hermann Scheer Foundation, UnternehmensGruen
 - *Valentin Hollain*, EUROSOLAR, Germany
- **Nuclear and renewables: Allies or enemies in a low carbon economy?**
 - *Srinivas Krishnaswamy*, Vasudha Foundation, India
- **Clean Disaster Mechanism? Nuclear, CDM, and the UN negotiations**
 - *Vladimir Slivnyak*, Ecodefense, Russia

To be followed by a general discussion on the issues to enable exchange among those attending.
